

dobesmic Week 1 Task 2

- Q) What was your initial question or idea?
- A) How many people were isolated (but not hospitalized) in the dataset per canton?
- Q) How did you proceed to arrive at an answer?
- A) We can use the `groupby` method to group the data by canton and then sum over the `current_isolated` column for each canton.
- Q) What are your results?
- A) Here's the following table showing the total number of people isolated (but not hospitalized) in each canton:
